Robot Framework

Agenda

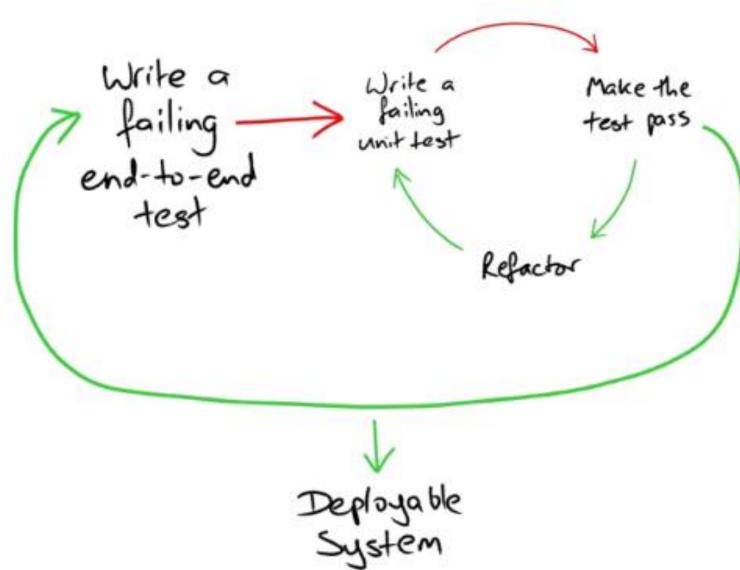

- Introduction to Robot Framework
- Installation
- Robot Framework Standard Library
- Robot Framework External Library
- Selenium2Library
- Simple Command
- Workshop
- Reviews Code

Development Cycle

http://testobsessed.com/wp-content/uploads/2011/04/atddexample.pdf

Cycle

Robot Framework

- Test automation framework
- https://code.google.com/p/ robotframework/
- Keyword-Driven Development
- Based on Python
- Open source
- Sponsor by Nokia Siemens Networks

Modular

Test Data Test data syntax Robot Framework Test library API Test Libraries **Test Tools** System interfaces System Under Test

Installation

- Python 2.7/2.8
- pip
- Robot Framework
- Selenium2Library for Robot Framework

Install python (1)

- Download from https://www.python.org/
- Version 2.7/2.8
- Run -> python-2.7.12.msi
- \$python

Install python (2)

For Windows OS!

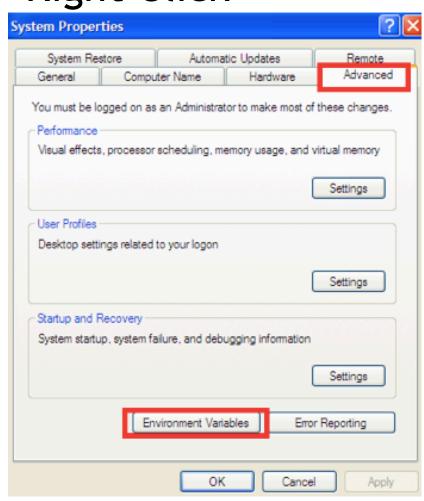

- set PYTHON_HOME=c:\python27
- set PATH=.;c:\Python27;c:\Python27\Scripts;
 %PATH%

Install python (3)

Go to My Computer -> Right Click ->

Properties

Choose tab Advanced

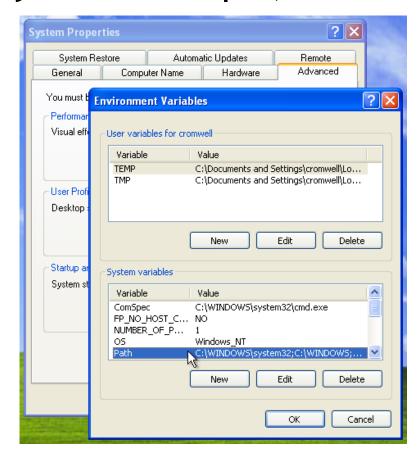

Install python (4)

Add Environment Variable

- PATH =.;c:\Python27;c:\Python27\Scripts;

%PATH%

Install python (5)

Install Completed

```
Command Prompt - python
                                                                                           - D X
Microsoft Windows XP (Version 5.1.2600)
(C) Copyright 1985-2001 Hierosoft Corp.
CINDocuments and Settings\demo>python
Enthought Python Distribution — http://www.enthought.com
Dermina: 6.8.1 (32-bit)
Python 2.6.4 | EPD 6.8.1 <32-bit)| <r264:75786, Nov 11 2009, 19:42:36> (MSC v.150 B 32 bit <latel)| on win32
Type "help", "copyright", "credits" or "license" for more information.
```

Install pip (1)

- PIP = Package Installation for Python
- http://www.pip-installer.org/en/latest/ installing.html
- Download file get-pip.py
- \$python get-pip.py

Install pip (2)

\$pip

```
Usage:
  pip <command> [options]
Commands:
  install
                              Install packages.
                              Uninstall packages.
  uninstall
                              Output installed packages in requirements format.
  freeze
  list
                              List installed packages.
                              Show information about installed packages.
  show
                              Search PyPI for packages.
  search
                              Build wheels from your requirements.
  wheel
                              Zip individual packages.
  zip
                              Unzip individual packages.
  unzip
                              Create pybundles.
  bundle
                              Show help for commands.
  help
General Options:
  -h, --help
                              Show help.
                              Give more output. Option is additive, and can be used up to 3 times.
  -v, --verbose
  -V, --version
                              Show version and exit.
  -q, --quiet
                              Give less output.
  --log-file <path>
                              Path to a verbose non-appending log, that only logs failures. This
                               log is active by default at /Users/spock/Library/Logs/pip.log.
  --log <path>
                              Path to a verbose appending log. This log is inactive by default.
  --proxy <proxy>
                              Specify a proxy in the form [user:passwd@]proxy.server:port.
  --timeout <sec>
                               Set the socket timeout (default 15 seconds).
  --exists-action <action>
                              Default action when a path already exists: (s)witch, (i)gnore,
                               (w)ipe, (b)ackup.
                               Path to alternate CA bundle.
  --cert <path>
```

Install Robot Framework

- \$pip install robotframework
- \$pybot

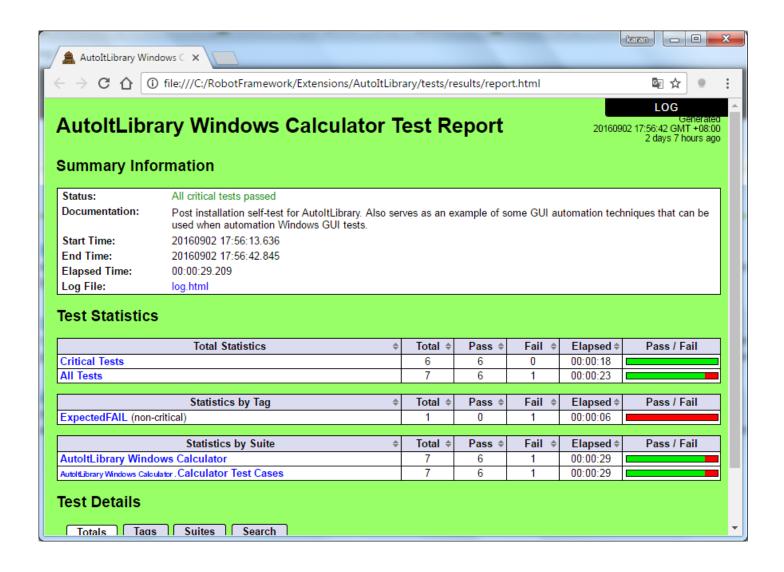

```
[ ERROR ] Expected at least 1 argument, got 0.

Try — help for usage information.
```

Install Selenium

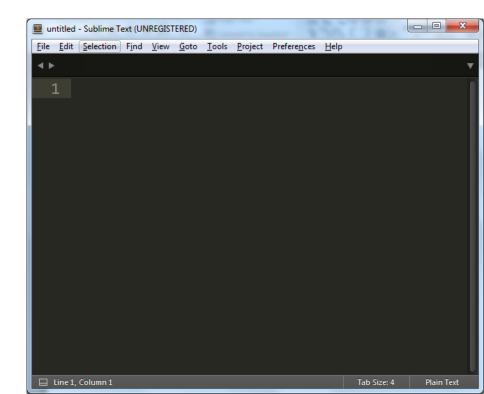

\$pip install robotframeworkselenium2library

Robot Framework - Test Report

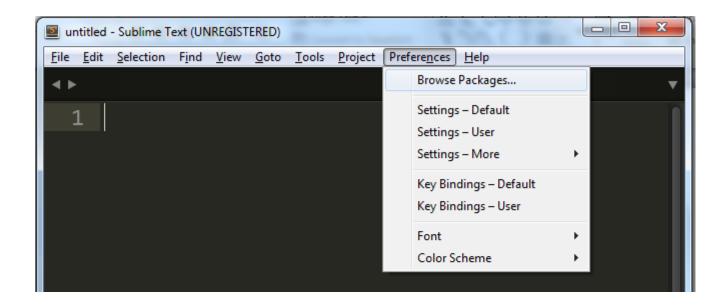

Install Sublime 3 (Editor)

- Sublime 3
 - http://www.sublimetext.com/
 - Sublime Text Build 3114 x64 Setup.exe
 - Open Sublime3

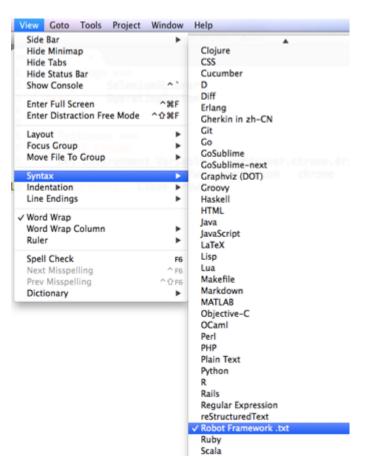

Install Robot Framework - Sublime Extension

- Goto Preferences -> Browse Packages ...
- Double Click Folder "User"
- Copy "Robot Framework Assistant" into this (User) Folder

Sublime - Robot Framework

```

Standard Library

Builtin

Provides a set of often needed generic keywords. Always automatically available without imports.

Dialogs

Provides means for pausing the test execution and getting input from users.

Collections

Provides a set of keywords for handling Python lists and dictionaries.

OperatingSystem

Enables various operating system related tasks to be performed in the system where Robot Framework is running.

Remote

Special library acting as a proxy between Robot Framework and test libraries elsewhere. Actual test libraries can be running on different machines and be implemented using any programming language supporting XML-RPC protocol.

Screenshot

Provides keywords to capture screenshots of the desktop.

String

Library for generating, modifying and verifying strings.

Telnet

Makes it possible to connect to Telnet servers and execute commands on the opened connections.

XML.

Library for generating, modifying and verifying XML files.

Process

Library for running processes in the system. New in Robot Framework 2.8.

DateTime

Library for date and time conversions. New in Robot Framework 2.8.5.

External Library

Android library

Library for all your Android automation needs. It uses Calabash Android internally.

AnywhereLibrary

Library for testing Single-Page Apps (SPA). Uses Selenium Webdriver and Appium internally.

AppiumLibrary

Library for Android- and iOS-testing. It uses Appium internally.

Archive library

Library for handling zip- and tar-archives.

AutoItLibrary

Windows GUI testing library that uses AutoIt freeware tool as a driver.

Database Library (Java)

Java-based library for database testing. Usable with Jython.

Available also at Maven central.

Database Library (Python)

Python based library for database testing. Works with any Python interpreter, including Jython.

Diff Library

Library to diff two files together.

Django Library

Library for Django, a Python web framework.

robotframework-faker

Library for Faker, a fake test data generator.

FTP library

Library for testing and using FTP server with Robot Framework.

HTTP library (livetest)

Library for HTTP level testing using livetest tool internally.

HTTP library (Requests)

Library for HTTP level testing using Request internally.

iOS library

Library for all your iOS automation needs. It uses Calabash iOS Server internally.

ImageHorizonLibrary

Cross-platform, pure Python library for GUI automation based on image recognition.

MongoDB library

Library for interacting with MongoDB using pymongo.

MQTT library

Library for testing MQTT brokers and applications.

Rammbock

Generic network protocol test library that offers easy way to specify network packets and inspect the results of sent and received packets.

RemoteSwingLibrary

Library for testing and connecting to a java process and using SwingLibrary, especially Java Web Start applications.

SeleniumLibrary

Web testing library that uses popular Selenium tool internally.

Uses deprecated Selenium 1.0 and is also itself deprecated.

Selenium₂Library

Web testing library that uses Selenium 2. For most parts drop-inreplacement for old SeleniumLibrary.

> Selenium2Library for Java Java port of the Selenium2Library.

> > SSHLibrary

Enables executing commands on remote machines over an SSH connection. Also supports transfering files using SFTP.

SudsLibrary

A library for functional testing of SOAP-based web services based on Suds, a dynamic SOAP 1.1 client.

SwingLibrary

Library for testing Java applications with Swing GUI.

watir-robot

Web testing library that uses Watir tool.

Selenium Keyword

- Open Browser <url> <browser>
- Input Text <locator> <value>
- Click Button <locator>
- Click Link <locator>
